

Bolted Tanks

Bolted tanks are your most cost-effective storage solution offering outstanding performance, reliability and ease of installation.

USA Tank has a team of professionals with extensive knowledge that can assist you with any volume of storage you may require. We can create a storage solution of uncompromised quality that will fit your budget and schedule.

We erect our own tanks with field crews that are factory-trained employees. Our construction crews receive more than 120 hours of in-house safety training; this guarantees your project is completed safely and efficiently. USA Tank has an impressive safety rating - Our safety rating allows us to work for customers on sites where many competitors are unable to work.

The Bolted Advantage

- Speed and ease of manufacturing and erection
- Worry-free quality in design and coatings
- Least expensive solution over lifetime
- Green friendly, eliminating environmental concerns
- Lower erection cost due to economical shipping and elimination of field welding
- Bolted tanks can be relocated and expanded, improving residual value

Liquid Storage

Our epoxy-coated panels are finished in our factory with a thermal-set, fusion-bonded powder coating. This NSF-approved technology has been a preferred finish for AWWA-rated components for more than 10 years. USA Tank has a precedent-setting two-year warranty on its interior and exterior surfaces, with options available up to 10 years.

Through decades of experience in tank sales and construction, we've learned that quality and value aren't negotiable. That's why thousands of companies worldwide rely on us for their liquid and dry bulk storage solutions.
