

USA Tank Storage Systems

Fire Protection Storage Tanks

Fire Protection

USA Tank Storage Systems leads the field in the construction of water storage tanks for fire protection. Each tank is individually engineered for the application needed. Factory-coated bolted steel tanks are often the most economical and longest lasting form of storage for fire protection water. Specialty tank engineering is also available for combination process water/fire protection.

When the quality of single tank construction is a priority, USA Tank can engineer your system to be certain that the reserve capacity meets the potential demand for fire protection. From 4,000 to 3 million gallon capacity, USA Tank can provide the size you need conforming to NFPA-22 requirements as well as Factory Mutual approval.

Tank accessories from USA Tank include:

- Insulation
- Immersion tank heaters
- Level controls
- Valve enclosures
- Pumps

USA Tank has been engineering and constructing customized storage systems for over 30 years. From the sales staff to experienced construction crews and specialized engineering through total project management, USA Tank has everything your project requires. Count on USA Tank for quality, value, and a finished product we can proudly claim is holding to a higher standard.
