

USA Tank Storage Systems

Potable Water Storage Tanks

Potable Water Storage Tanks

We construct storage tanks to specific requirements. Our factory-applied and baked-on Trico Bond 478 EP interior coating system is NSF Standard 61 approved for potable water. We can design and fabricate potable water tanks for all municipalities, rural water districts, and private water storage system requirements, with capacities up to five million gallons.

USA Tank's Potable Water Storage capabilities are indeed extensive:

- Flat-bottom, dish-bottom, and slope-bottom tank applications
- We provide the best coating processes in the industry
- Quick field installation by professional crews
- Shop-fabricated bolted and welded tanks minimize field installation requirements for ground reservoirs, elevated, and standpipe tank applications
- USA Tank is equipped for immediate mobilization with fully equipped, self-contained shipping containers

USA Tank has been engineering and constructing customized storage systems for over 30 years. From the sales staff to experienced construction crews and specialized engineering through total project management, USA Tank has everything your project requires. Count on USA Tank for quality, value, and a finished product we can proudly claim is holding to a higher standard.
